

Mirian Ben is a Clinical Diagnostic Laboratory Technician specialized in genetics and molecular biology techniques.

In 2016 she won a FEUGA scholarship to work on the Genomic Medicine Foundation as laboratory technician; there she acquired extensive experience in Next Generation Sequencing techniques and in samples processing for cytogenetic diagnosis.

Since 2018, she is part of the GENVIP group where she is responsible of the biobank organization and her field of expertise is samples processing and labelling for both European and local projects.
